**Numa Debuts New Workflow/Scheduler Manager**  
**For Medical Imaging Departments**

Numa, leader in nuclear medicine connectivity and system integration, will debut a new product at the SNM '09 that will revolutionize the workflow and schedule management of a molecular imaging department.

**NumaManage™** is a patient scheduling and workflow manager designed to streamline the workflow process. This product will replace the traditional static whiteboard with a digital, touch screen interface, providing flexibility and efficiency with real-time information updates. NumaManage is also a DICOM Worklist Provider, in which the user only needs to input patient information once and the information is distributed accurately throughout the department. This new tool also has the ability to reference the current stage in the patient study procedure by a coloring coding system which will mark the arrival, start, completion, or a cancellation of the study.

NumaManage will ultimately eliminate the need to re-enter patient, reduce in re-work due to fewer human errors, streamline workflow, allow patient/camera/room scheduling to be done all on a computer, customize profiles to fit study protocols, and the capability of embedding notes into the studies.

NumaManage puts the ability to manage patients, images and equipment of a typical Nuclear Medicine or PET/CT department at the touch of your hand.
